Front-End Developer specializing in React, with strong proficiency in HTML, CSS, and JavaScript. Expert in creating responsive, user-friendly web applications and developing scalable solutions to meet evolving business needs.

## PROJECTS

### 2 chats appliaction

Project directory structure a chat application built with **react** and **firebase**, featuring user authentication, real-time messaging, and room management. users can sign in, join rooms, and send messages with timestamps. the interface includes an emoji picker and profile avatars.

### E-learning Platform

I developed a learning platform using **HTML**, **JavaScript**, **React**, **Tailwind CSS**, and **Firebase**. Users can **sign up** to access courses, and their progress is tracked with a **progress bar**, allowing them to resume learning where they left off. Firebase handles **authentication** and user data, while the platform's responsive design is built with Tailwind CSS for a smooth, user-friendly experience.

### 2 Dashboards

An admin dashboard app built with **react**, **recharts**, and **react router dom**. monitor and manage data efficiently with intuitive visualizations and responsive design

### 3 E-commerce Website

Developed three e-commerce stores using **react**, **react router**, **tailwind**, and **javascript**, enabling seamless product management and dynamic filtering. leveraged the **context api** for efficient state management, allowing users to easily add, remove, and view products. focused on delivering a responsive and smooth user experience.

### Kanban Task Managemant App

Manage tasks effortlessly across boards with this **react**-based kanban board app. add, delete, and complete tasks with ease. dark mode and drag-and-drop functionality included!

### 11+ landing pages

created 11+ responsive landing pages using **html**, **css**, **javascript**, **bootstrap**, **tailwind**, and **react**. focused on clean design and seamless user experience. check out the projects on my github.
